

EQUIPMENT AND MACHINERY

Safety Checklist

Safety Devices

- Machine guards are in place on all operating equipment
- Belts, pulleys and other rotating/moving parts are properly guarded
- Emergency stop buttons are clearly visible and operational

Work Areas

- There is adequate aisle space and clearance around equipment and machinery
- Work areas are kept clean
- Ventilation is appropriate
- Noise is reduced by engineering controls or PPE
- Equipment and Tools are stored in the proper place

Safe Operation

- Workers are trained to operate the equipment and machinery safely
- Workers are supervised to ensure that proper operating procedures are being followed
- Proper PPE is worn by employees operating the equipment and machinery
- PPE is maintained and in good condition
- Equipment and machinery are regularly inspected for wear and damage
- Equipment is maintained in accordance with manufacturer's instruction
